```
Jenkins Scripted Pipeline (Groovy)
--> For scripted pipeline, we will be using Groovy language
--> Flexibility
--> Customization
--> Reusable components

Syntax:

node {

stage('git clone'){
echo 'git cloning'
}

stage('build'){
echo 'build...'
}
```

```
-rwxr-x--- 1 ubuntu ubuntu 1908 Jun 5 17:49 version.sh
ubuntu@ip-172-31-11-116:~/apache-tomcat-11.0.8/bin$ sh startup.sh
Using CATALINA_BASE: /home/ubuntu/apache-tomcat-11.0.8
Using CATALINA_HOME: /home/ubuntu/apache-tomcat-11.0.8
Using CATALINA_TMPDIR: /home/ubuntu/apache-tomcat-11.0.8/temp
Using JRE_HOME: /usr
Using CLASSPATH: /home/ubuntu/apache-tomcat-11.0.8/bin/bootstrap.jar:/home
Using CATALINA_OPTS:
Tomcat started.
ubuntu@ip-172-31-11-116:~/apache-tomcat-11.0.8/bin$
```

New Item

Enter an item name

demo_scripted_pipeline

Select an item type

Freestyle project

Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.

Pipeline

Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

Multi-configuration project

Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

Folder

Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.

```
Pipeline
   Define your Pipeline using Groovy directly or pull it from source control.
   Definition
    Pipeline script
            1 v node {
2 def mvnHome
                                                                                                                                                                                      Scripted Pipeline

Finished: SUCCESS
```

Go back to Pipeline --> Configure

```
Sample Step
```

```
git: Git
   git ?
   Repository URL ?
    https://github.com/Haider7214/SpringApp.git
   Branch ?
    main
  Credentials ?
     - none -
      + Add
       Include in polling? ?
       Include in changelog? ?
Generate Pipeline Script
git branch: 'main', url: 'https://github.com/Haider7214/SpringApp.git'
```

For Declarative it is different, for Scripted it is totally different git branch: 'main', url: 'https://github.com/Haider7214/SpringApp.git'

```
node {
    def mvnPath
    stage('git clone') {
        git branch: 'main', url: 'https://github.com/Haider7214/SpringApp.git'
    }
    stage('Maven Build') {
        def mvnHome = tool name:'maven:3.9.10', type='maven';
        mvnPath = "${mvnHome}/bin/mvn";
        sh "${mvnPath} clean package";
        echo 'maven build success';
    }
}
```

Define your Pipeline using Groovy directly or pull it from source control.

Multi Branch Pipeline in Jenkins

In Git repo, there will be multiple branches -> main branch, master, developer, release, feature During git cloning, we got to specify which branch we are cloning from. Same Jenkins pipeline cannot work for all branches then if we are specifying the branch name explicitly

- --> Creating different Jenkins pipeline for every branch would be difficult
- --> We can create one common pipeline and build the code from multiple branches at a time with the help of "Multi-branch pipeline" concept
- --> When we create Multi-branch pipeline, it will scan all the branches in given Github repo and execute pipeline for all the branches

Whichever branch only has the code change, only that branch will be built

Note: Whenever we run Multi-branch pipeline for second time, it will execute the pipeline for which code changes/commits have been done.
